Batman Arkham City Blackbox Repack Crack 501. Field of the Invention The present invention relates to display apparatuses such as projection type display apparatuses that control the quantity of light of light beams emitted from a light source by regulating the quantity of light from a light source, and more particularly to a lighting apparatus that is used for a liquid-crystal projector that projects an image on a screen or a like surface. 2. Description of the Related Art There is an arrangement for a lighting apparatus that, in a projection type display apparatus, illuminates an image display element such as a liquid-crystal light valve as an element that receives light from a light source, with a light-emitting diode that is used as the light source. There is another arrangement for a lighting apparatus that illuminates an illumination unit using a light-emitting diode as a light source in a projection type display apparatus such as a video projector. As the light source, there is an arrangement that uses a light-emitting diode as a light source using a semiconductor light emitting element capable of generating white light, or an arrangement that uses a light-emitting diode as a high-brightness light source having a high brightness per one diode. In addition, as the light source, there is a lighting apparatus that is provided with a plurality of light-emitting diodes arranged in a matrix form, a light-emitting diode, or a light-emitting diode that converts light from a semiconductor light-emitting element into light in a blue or ultraviolet wavelength range. The light-emitting diode that is used as the light source for the lighting apparatus has the advantages of being smaller, lighter, and lower in power consumption. When the light-emitting diode is used as a light source in a projection type display apparatus, the display apparatus needs to be made compact so that the projection apparatus can be reduced in size. Therefore, the light-emitting diode is used in combination with optical components such as an integrator and a condenser lens in order to make the projection type display apparatus compact. On the other hand, because of the recent increase in the number of pixels of the image display element such as the liquid-crystal light valve or the like, the amount of light increases. Thus, there are problems in that, in the case where the light source is made small or the brightness of the light source decreases, f678ea9f9e
